BURST DISC KIT, LOW PRESSURE SCBA 30 MINUTE CYLINDERS

Beginning in January 1990 a new burst disc for the 30 minute 2216 psi SCBA cylinders will be available. The new disc in the kit has been changed and will slightly increase the burst pressure to allow for a greater range of storage and shipping conditions.

The new burst disc kit, P/N 0502-47 contains a violet disc and the plug has 3693V stamped on it. The old burst disc kit, (P/N 0502-38) which contains a white disc can continue to be used indefinitely.

Installation and care for either kit remains the same.
