BLACK BODIED ALARM P/N 960244 AND 960247

The black bodied alarms listed above were last produced by U.S. Divers Company in 1977. These black bodied alarms are still legitimate components of NIOSH certified SCBA. However, because of the age of these alarms, SURVIVAIR can no longer provide complete parts support.

Certified technicians should replace the alarm when:

- a) The alarm has been placed on SCBA other than the original SCBA.
- b) The original SCBA has been modified or upgraded.
- c) Required overhaul parts are not available. The scheduled overhaul interval for all XL-30 series SCBA's is 3 years.
- d) The alarm exhibits any functional problems and required repair parts are not available.

The current XL-30 and XL-60 alarms, P/N 960722 (LP) and 960721 (HP) are authorized for use on appropriate NIOSH certified SCBA as replacements for these black body alarms.
