

AVIOXYCART - OXYGEN GROUND SERVICE CART

FOR SALE

BRIEF DESCRIPTION:

AviOxyCart - An oxygen svc cart for the private pilot or the FBO needing an easy way to refill aircraft oxygen cylinders on the tarmac or in your own T hanger. Designed for Mooney but works with all.

AviOxyCart stores easily in a T hanger, its low profile and can be towed or pushed to the tarmac for O2 oxygen servicing. An option will allow either shop air, or your stored nitrogen, to power the pump for further operational savings. Compressed oxygen and nitrogen cylinders are easy to replace with hinged rack system. Custom lengths on fill hose assembly are available at additional costs. Pneumatic cart tires are foam filled and never need refilled. A low pressure (LP) nitrogen kit, including LP hose, tire inflation adapter and air spray adapter, comes with the unit to allow the operator to refill aircraft tires and landing gear struts. LP nitrogen kit includes easy to use quick connections. Both the LP nitrogen kit and the oxygen hoses can be stored in the aluminum tread plate storage compartment, mounted under the unit. Reflective safety tape helps identify the cart when being towed at night. DOT gas cylinders not included but could be. Email your first impressions on this cart.
